

DIY Telescope!

MATERIALS NEEDED

- 3 Toilet Paper Rolls
- Scissors
- Construction Paper
- Tape
- Ribbon
- Markers

ESTIMATED TIME: 5-10 min

STEPS

1. Cut 7-8 inches of ribbon.
2. Tape the ribbon to the inside of the 1st toilet paper roll, near the top.
3. Grab the 2nd toilet paper roll and cut it in half vertically. Only cut one side in half, not the whole thing.
4. Wrap the cut edges around each other so that the toilet paper roll will fit snugly into the 1st toilet paper roll.
5. Tape the cut edges shut, then put it into the 1st toilet paper roll.
6. Do the same thing to the 3rd toilet paper roll, except this is one is going inside the 2nd toilet paper roll! Cut off any extra ribbon.
7. Tape the ribbon to the inside of the 3rd toilet paper roll, near the bottom!
8. Tape a piece of construction paper at the bottom of each toilet paper roll! It should look like there's a ring stuck to the bottoms.
9. Ta-da! You have a cool and collapsible telescope!
10. For extra fun, design it with markers or add more construction paper to it.
